

Oguzhan Ertas

Frontend Team Lead with 4+ years leading UI architecture and design-systems work, plus full-stack range across TypeScript, React, Next.js, and Node.js. Known for taking ambiguous, multi-month initiatives — a full UI library redesign, a production IoT dashboard — and shipping them ahead of schedule.

WORK EXPERIENCE

Atolye15

Frontend Team Lead

Jan 2022 - Present

- Led a complete redesign of the company's shared UI library, planning a 3-month roadmap and delivering it in under 2 months as the engineer responsible for both design execution and technical architecture.
- Set agile workflows and ran code reviews across distributed teams; mentored engineers and wrote the technical documentation shared packages now run on.
- Bridged domain logic and UI implementation for high-traffic, document-centric microservices by partnering directly with backend engineers.
- Built Baumappe, a multi-module TypeScript platform for business-process digitization, including Redkit — a centralized package that standardized error states across every microfrontend and removed a recurring source of tech debt.
- Sole developer on an IoT tracking dashboard, architected and shipped to production in under 3 weeks using Next.js, Better-Auth, and Lingui.
- Took Codebie's landing page from design to production in 4 weeks using Next.js and Tailwind.

Yonelis

Web Administrator

Jun 2014 - Feb 2021

- Resolved UI issues and improved site reliability based on user session data.
- Translated business requirements into technical frontend solutions.

Amazon

Selling Partner Support Associate

Nov 2018 - Nov 2019

- Resolved complex seller inventory and reporting issues.

EDUCATION

Yeditepe University

B.A. in English Language and Literature - 3.45 GPA

Spring 2016

- Graduated with Honors
- University of North Carolina at Greensboro Exchange in English - 3.80 GPA Spring 2016

SKILLS

- Frontend: TypeScript, React, Next.js, Tailwind, Shadcn/UI, i18n (Lingui), Design Systems.
- Backend & API: Node.js, Hono, GraphQL, REST, PostgreSQL, Better-Auth.
- Tools: Playwright, Cypress, CI/CD, Git, Linux.
